

Amendments to the Claims:

The following listing of claims will replace all prior versions and/or listings of claims in the application.

Listing of Claims:

Claims 1-65. (Canceled)

66. (Currently amended): A method, comprising:

providing at least two fraud potential indicators for a request, wherein a first fraud potential indicator is assessed using a first fraud potential detection technique and a second fraud potential indicator is assessed using a second fraud potential detection technique, wherein the first fraud potential detection technique is different from the second fraud potential detection technique;

displaying a score or a rank for at least the first and second fraud potential indicators simultaneously in a graphical user interface;

determining a ~~combined or weighted~~ combined fraud potential indicator that ~~is based on~~ combines at least the first fraud potential indicator assessed using the first fraud technique and the second fraud potential indicator assessed using the second fraud technique, wherein, in combining the first fraud potential indicator and the second fraud potential indicator, the first fraud potential indicator is weighted differently from the second fraud potential indicator; and

referring the request for review if the ~~combined or weighted~~ combined fraud potential indicator exceeds a threshold value, wherein the threshold value is adjusted to control the number of requests with the ~~combined or weighted~~ combined fraud potential indicator exceeding the threshold value.

67. (Previously presented): The method of claim 66, wherein clicking on at least one of the displayed fraud potential indicators for the request displays information about the request.

68. (Canceled)

69. (Previously presented): The method of claim 66, wherein the request is an insurance claim, the method further comprising displaying a plurality of insurance claims, wherein the insurance claims are organized into lists according to referred claims, assigned claims, and rejected claims, and wherein selecting a graphical component respective to referred claims brings up a list of referred claims, wherein selecting a graphical component respective to assigned claims brings up a list of assigned claims, and wherein selecting a graphical component respective to rejected claims brings up a list of rejected claims.

70. (Previously presented): The method of claim 69, further comprising changing a criterion about which claims to display by selecting a filter graphical component.

71. (Original): The method of claim 66, further comprising assigning at least one request by selecting an assigned graphical component.

72. (Original): The method of claim 66, further comprising rejecting at least one request by selecting a reject graphical component.

73. (Original): The method of claim 66, wherein at least one fraud potential detection technique comprises predictive modeling.

74. (Original): The method of claim 66, wherein at least one fraud potential detection technique comprises at least one identity search of insurance claim data.

75. (Original): The method of claim 66, wherein at least one fraud potential detection technique comprises assessing request data using at least one business rule.

76. (Currently amended): A system, comprising:

a CPU; and

a memory coupled to the CPU, wherein the memory is configured to store at least one computer program executable by the CPU, and wherein at least one computer program is executable to:

assess at least two fraud potential indicators for a request from the memory, wherein a first fraud potential indicator is assessed using a first fraud potential detection technique and a second fraud potential indicator is assessed using a second fraud potential detection technique, wherein the first fraud potential detection technique is different from the second fraud potential detection technique;

display a score or a rank for at least the first and second fraud potential indicators simultaneously in a graphical user interface coupled to the CPU;

determine a ~~combined or weighted~~ combined fraud potential indicator that is ~~based on~~combines at least the first fraud potential indicator assessed using the first fraud technique and the second fraud potential indicator assessed using the second fraud technique, wherein, in combining the first fraud potential indicator and the second fraud potential indicator, the first fraud potential indicator is weighted differently from the second fraud potential indicator; and

refer the request for review if the ~~combined or weighted~~ combined fraud potential indicator exceeds a threshold value, wherein the threshold value is adjusted to control the number of requests with the ~~combined or weighted~~ combined fraud potential indicator exceeding the threshold value.

77. (Original): The system of claim 76, wherein at least one fraud potential detection technique comprises predictive modeling.

78. (Original): The system of claim 76, wherein at least one fraud potential detection technique comprises at least one identity search of insurance claim data.

79. (Original): The system of claim 76, wherein at least one fraud potential detection technique comprises assessing the probability of fraud in request data using at least one business rule.

80. (Currently amended): A ~~carrier~~-computer-readable medium comprising program instructions, wherein the program instructions are computer-executable to implement a method comprising:

assessing at least two fraud potential indicators for an insurance claim, wherein a first fraud potential indicator is assessed using a first fraud potential detection technique and a second fraud potential indicator is assessed using a second fraud potential detection technique, wherein the first fraud potential detection technique is different from the second fraud potential detection technique;

displaying a score or a rank for at least the first and second fraud potential indicators simultaneously in a graphical user interface;

determining a ~~combined or weighted~~ fraud potential indicator that ~~is based on~~ combines at least the first fraud potential indicator assessed using the first fraud technique and the second fraud potential indicator assessed using the second fraud technique, wherein, in combining the first fraud potential indicator and the second fraud potential indicator, the first fraud potential indicator is weighted differently from the second fraud potential indicator; and

referring the request for review if the ~~combined or weighted~~ combined fraud potential indicator exceeds a threshold value, wherein the threshold value is adjusted to control the number of requests with the ~~combined or weighed~~ combined fraud potential indicator exceeding the

threshold value.

81. (Currently amended): The computer-readable ~~carrier~~-medium of claim 80, wherein at least one fraud potential detection technique comprises predictive modeling.

82. (Currently amended): The computer-readable ~~carrier~~-medium of claim 80, wherein at least one fraud potential detection technique comprises at least one identity search of insurance claim data.

83. (Currently amended): The computer-readable ~~carrier~~-medium of claim 80, wherein at least one fraud potential detection technique comprises assessing request data using at least one business rule.

Claims 84-133. (Cancelled)

134. (Currently amended): A method, comprising:

assessing at least two fraud potential indicators for an insurance claim, wherein a first fraud potential indicator is assessed using a first type of fraud potential detection, and wherein a second fraud potential indicator is assessed using a second type of fraud potential detection, and wherein the types of fraud potential detection are based on an identity search engine, a predictive model engine, or a business rule engine, and wherein the first type of fraud potential detection is different from the second type of fraud potential detection;

simultaneously displaying information about an insurance claim including identifying information for the claim and a score or a rank for at least the first and second fraud potential indicators for the insurance claim; and

determining a ~~combined or weighted~~ combined fraud potential indicator that ~~is based on~~ combines at least the first fraud potential indicator assessed using the first type of fraud detection

and the second fraud potential indicator assessed using the second type of fraud detection,
wherein, in combining the first fraud potential indicator and the second fraud potential indicator,
the first fraud potential indicator is weighted differently from the second fraud potential
indicator; and

referring the request for review if the ~~combined or weighted~~ combined fraud potential
indicator exceeds a threshold value, wherein the threshold value is adjusted to control the number
of requests with the ~~combined or weighted~~ combined fraud potential indicator exceeding the
threshold value.

Claims 135-158. (Cancelled)

159. (Previously presented): The method of claim 134, wherein at least one engine used to
assign at least one of the first or second fraud potential indicators is a predictive modeling
engine, and wherein displaying the score or rank for the first and second fraud potential indicator
comprises displaying criteria used by the predictive modeling search engine to assign the fraud
potential indicator based on the predictive modeling search engine.

160. (Previously presented): The method of claim 134, wherein at least one engine used to
assign at least one of the first or second fraud potential indicators is an identity search engine,
and wherein displaying the score or rank for the first and second fraud potential indicator
comprises displaying information on at least one match used by the identity search engine to
assign the fraud potential indicator based on the identity search engine.

161. (Previously presented): The method of claim 134, wherein at least one engine used to assign at least one of the first or second fraud potential indicators is a business rule engine, and wherein displaying the score or rank for the first and second fraud potential indicator comprises displaying information on at least one match used by the business rule engine to assign the fraud potential indicator based on the business rule engine.

162. (New): The method of 134, wherein the first type of fraud potential detection comprises a first predictive model and the second type of fraud potential detection comprises a second predictive model.

163. (New): The method of 134, wherein the first type of fraud potential detection comprises a predictive model and the second type of fraud potential detection comprises a business rules engine.
